

We have something
special just for you.

Industrial toll manufacturing at the highest level.

Only the finest for you:

Our Know-How.

We combine 100 years of tradition with innovation.

- Over the years we have built-up a wealth of expertise in micronising products. We can now draw upon our experience of more than 10 years in this field.
- We can offer you an excellent customised process development service as well as a quality service from our own labs within our research and development department.
- Our day-to-day business is to manufacture, micronise and mix a wide range of substances.
- We can mix, micronise and homogeneously fill substances with a wide range of particle sizes.

Efficiency.

We offer the best service.

- We offer you a tailored toll manufacturing service of the highest quality.
- Excellent milling skills using state of the art air-jet mills are combined with highly effective blending machines to create our own unique mixing and fine milling capabilities.
- We consider ourselves as "green" as 30 % of our electrical energy demand is produced via our own hydroelectric power capabilities.
- Our technology results in reduced emissions and minimal waste formation.
- Our quality systems for process control and finished product quality ensures a standard which should meet even the highest requirements.
- Various qualified analytical methods are available to ensure product quality assurance.

YOU WANT WHAT...

ACTIVATED CARBONS ABRASIVES ALUMINUM OXIDE BUILDING MATERIALS CARBONS CERAMICS CHEMICALS

Flexibility.

Several individual milling lines provide a high level of flexibility.

- A separate mill for pilot projects and small quantity campaigns enables flexible milling quantities ranging from kilograms to multi-tonne volumes.
- We offer the possibility of various packaging variations to suit your needs.
- Our speciality – we can mix and micronise your products to meet your every requirement.
- Flexible logistic – we can arrange the optimal logistic handling for your products.

The highest level.

With our technical prerequisites we can supply optimal results.

- accurate fine milling with minimal particle size distributions
- micro particle sizes down to 1,5 μm (d50-value)
- minimum ignition energy (MIE) ≥ 1 mJ
- dust explosion classes 1 & 2
- maximum explosion pressure of 10 bar
- no thermo contamination during micronisation
- inert milling conditions (for small quantities)

From the finest quality:

Mixing and milling all from one source: homogeneous and free of contamination

Effective plant concept with various blenders and air jet mills, which can be used both independently and flexibly combined.

ISO certified

ISO 9001, ISO 14001, OHSAS 18001, OHRIS- and EMAS certified, integrated management system and Responsible Care® member.

Customer service

Close to customer, customer orientated, low cost processing, and in-process controls.

Rapid handling and implementation

Using our many years of expertise, application technology skills and our own research and development department.

Optimal Performance

Via the appliance of supply chain management.

Please contact us with:

- your **product specification**
- the appropriate **material safety data sheet**
- and, if available, your **dust explosion data report**.
Upon request this can also be organised by ourselves.
