CREAMINO

ENERGY FOR HEALTHY GROWTH

Power up your feed – Boost efficiency

Creamino® – the source of creatine

alzchem group

Why is Creamino® so important?

CREAMINO® – POWER UP YOUR FEED

Creamino® is an innovative feed additive for livestock. It acts directly on cellular level and enables adequate creatine levels. With Creamino® more energy is available in all parts of the body – the basis for healthy and well-performing animals.

CREATINE – BATTERY PACK & ENERGY TRANSPORTER

Only an adequate creatine level ensures a proper energy transfer, storage and supply in the cells. This is especially important for growth and function of skeletal muscle, heart muscle, brain, reproduction, the immune system and other processes with high energy demand. Consequently, a sufficient creatine supply improves the energy efficiency in your animal's metabolism.

CREATINE – THE LOST NUTRIENT

The metabolism of modern livestock genetics is not able to synthesize adequate amounts of creatine. Moreover, modern livestock feed lacks creatine. The only effective way to make enough creatine available in modern livestock feed is to supplement Creamino®. In doing so your animals can reach their full performance potential.

CREAMINO® – THE SOURCE OF CREATINE

Creamino® contains the direct precursor of creatine, guanidinoacetic acid (GAA). In the body, GAA is transferred immediately into creatine. Unlike creatine, GAA is heat stable and therefore Creamino® is ideally suited for the production of animal feed.

Creamino® takes your feed to the next level!

ECONOMIC FEEDING

Creamino® improves the performance of your feed. It enhances feed conversion ratio or allows the sparing of feed ingredients like oil, fats or arginine. Supplementing Creamino® ensures well-performing animals while optimising feeding costs.

ANIMAL PERFORMANCE

Creamino® supplementation optimises the energy metabolism of the animals. The resulting improved nutrient utilization leads to a better performance of the animals, reaching their genetic potential. This way, it enhances the profitability of producing high-quality food.

SUSTAINABLE PRODUCTION

The lack of creatine in all modern diets reduces the feed efficiency of livestock. Supplementing Creamino® consistently improves the feed performance. As a result, less feed resources are needed and less feed has to be processed. This supports sustainable animal production.

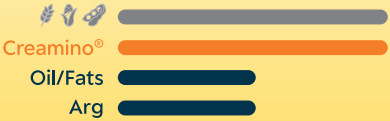

HEALTHY ANIMALS

All body functions including the immune system are dependent on an appropriate energy supply. Creamino® is proven to support healthy muscle growth, it increases (heat) stress resilience and improves the vitality of farm animals through a better creatine supply.

WATCH THE VIDEO

APPLY CREAMINO® FLEXIBLY

MATRIX APPROACH

Use Creamino® with **matrix values** for energy or arginine to reduce feed costs.

ON TOP APPROACH

Supplement Creamino® **on top** of feed to **increase the performance** of your livestock.

MIXED APPROACH

Combine these two application strategies of Creamino® **flexibly** according to your needs.

QUALITY MADE IN GERMANY

- Secured supply with our own integrated production in Germany
- Strict quality assurance in line with highest standards
- Best handling & mixing properties
- Proven in science & practice
- Extensive experience in cellular nutrition for over 30 years

Applications differ from country to country.
