sabine.sieber@alzchem.com

Trostberg, May 7, 2025 – Alzchem, a leading company in the chemical industry, has long been actively committed to the further education and training of its employees. In collaboration with the Bildungswerk der Bayerischen Wirtschaft (bbw) and supported by the Federal Employment Agency, Alzchem now also offers part-time training to become a chemical technician.

This training allows participants to develop and qualify professionally. This is particularly valuable for employees who are already working in production and wish to expand their knowledge and skills.

The training spans a period of two years and includes nine classes per week. It offers a good opportunity and chance to catch up on a skilled worker's qualification while working. To participate in the program, candidates need five and a quarter years of practical experience in chemical production by the time of the exam to be accepted for the external IHK exam.

The bbw instructors are professionals from the field who are also employed in this context or professional environment. This ensures practical and well-grounded education. All 12 participants of the last course successfully completed the training, with very impressive grade point averages.

For Alzchem, this initiative means targeted qualification of employees, which is beneficial for both the company and the employees themselves. Additionally, it contributes to strengthening the profession of chemical technician. The next group has started a new course in December 2024.

About Alzchem

Alzchem is a globally active specialty chemicals company that is one of the market leaders in most of its fields of activity. Alzchem offers answers to various global developments such as climate change, population growth and increasing life expectancy. We deliver solutions through brands and products of the highest quality and through a sustainable vision to help shape global developments.

The company sees interesting growth prospects for itself in the areas of human and animal nutrition and agriculture in particular. As a result of population growth, it is necessary to achieve efficient food production. Pharmaceutical raw materials and creatine products can contribute to a healthy old age as life expectancy increases. Alzchem is facing up to the goal of sustainability arising from climate change in the field of renewable energies and across the entire company. The fields of fine chemicals and metallurgy offer just as great a perspective.

Alzchem Group AG's broad product range includes dietary supplements, precursors for PCR tests and pharmaceutical raw materials. These offerings are the company's response to global trends and developments. Alzchem is ideally positioned in this respect and considers itself well prepared for an environmental future and global developments.

The company employs around 1,730 people at four production sites in Germany and a plant in Sweden, as well as three sales companies in the USA, China and England. Alzchem generated Group sales of EUR 554.2 million and EBITDA of EUR 105.3 million in 2024.
